netTerrain Logical

Powering Your Network Intelligence

Get the Power to Optimize Your IT Infrastructure

Gaining a clear understanding of your business' IT infrastructure, where IT assets are located and how they are related, not only helps you better manage your investments, but provides you with the insights you need to impact operational performance and drive business value. With real-time network topology visualization, you can troubleshoot problems more efficiently, identify underutilized assets, optimize capacity, better support network changes and make smarter planning and investment decisions.

Gone are the days of inefficient, time-intensive manual documentation and static, single-user documentation tools. Today's IT managers require real-time, multi-user, automated information to help them optimize IT performance and deliver value to their businesses. netTerrain Logical's powerful network visualization software platform can help.

netTerrain Logical is an enterprise-grade, multi-user, scalable software platform that provides powerful pictorial visualizations of your network. Feature rich and easy to use, netTerrain Logical provides dynamic, data-driven IT infrastructure graphical visualizations so that you can quickly gain intelligence about your network, its systems and related processes.
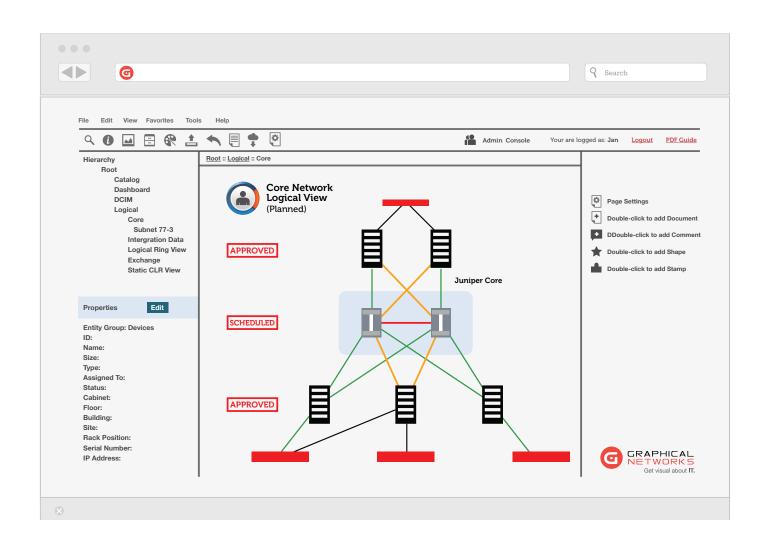

With netTerrain Logical, you can:

✔ Rapidly automate and dynamically update network documentation

✔ Improve accountability, governance and control

✔ Facilitate collaboration and communications

✔ Optimize capacity planning and investment decision making

netTerrain Logical Highlights

- Improve information sharing and collaboration with enterprise-grade, multi-user, single repository capabilities.

- Preserve data integrity and achieve regulatory compliance with accurate, real-time documentation and accountability.

- Speed problem identification and resolution times by isolating root cause problems.

- Optimize asset utilization and improve capacity planning and investment decision making with data-driven visualizations.

- Reduce the time and costs of documenting and tracking IT infrastructure and assets.

Automate, Document, and Visualize Your IT Infrastructure

netTerrain Logical's dynamic network documentation and diagramming capabilities provide graphical visualizations of your entire IT network and unleashes the power to optimize your infrastructure. netTerrain's feature- rich capabilities include:

- Web based, enterprise-grade, multi-user distributed platform.
- Hierarchal, dynamic data-driven network visual diagrams.
- Built-in CA netViz, MS Visio and spreadsheet import features to automate population of web diagrams.
- Ability to access real-time configurable attributes for any node or link with a simple click.
- Easily create visual overrides to track attributes based on custom criteria.
- Embedded reporting engine and database audit trail.
- Includes netTerrain DCIM with netTerrain Enterprise licensing option.

netTerrain Logical Features

- 100% web-based, data-driven visualization
- Distributed, multi-user, enterprise grade platform
- Flexible, simple and easy to use with fast search capabilities
- Create and edit web diagrams, add comments and embed documents
- Powerful drill down hierarchy navigation
- Import spreadsheets and CA netViz data
- Enterprise information sharing and collaboration
- Supports IT/ITIL best practices
- Ensures data integrity and compliance

Software
MS SQL Server 2008
Windows Server 2008
MS IIS 6.0 or better, .NET Framework 3.5 or better

Hardware
Intel i7 Processor
50GB Free Space
8GB RAM
